

# THE NEW SPHAGNUM FIELD GUIDE - FINALLY HERE!

We proudly present the 60 Stars of European *Sphagnum* mosses for both identification in field conditions and for microscopic work in the laboratory. The main emphasis is on the illustrations, mainly photographs, showing both macroscopic and microscopic characteristics of the species. Distribution of each species in Europe is given as well as the latest changes in taxonomy. This book is a collaboration among museum based botanists, field ecologists and peatland scientists and teachers.

This new magnificent book will help both field ecologists and paleo-ecologists/geologists in their demanding work of *Sphagnum* identification, and — also hopefully — reveal the beauty of the peatlands even in the smaller forms.

The book includes 326 pages and appr. 1000 high quality photos, bw line drawings, tables etc.

Price: 69 € + postage

**Special offer for orders during  
September, 2018: 54 € + postage**
